

Privacy Policy for Kid Court

Effective date: August 3, 2026

Last updated: August 3, 2026

Kid Court is operated by **Cubicle #6 LLC** ("Kid Court," "we," "us," or "our"). This Privacy Policy explains how the Kid Court mobile application (the "App") handles information.

Kid Court is designed for use by families and children. A parent or legal guardian should install and set up the App, review this Policy, control device permissions, and supervise use.

1. The short version

- We do not require an account.
- We do not ask children to type their real names. Children use animal characters in the App.
- We do not sell personal information or use it for targeted advertising.
- The App does not include third-party advertising.
- Microphone audio is used to turn speech into text. Recognition occurs on the device when supported. If on-device recognition is unavailable, Apple's speech-recognition service may process the audio under Apple's terms and privacy practices.
- The text of each side's argument is sent to OpenAI so the App can generate a ruling. Ruling text may also be sent to OpenAI to create Judge Hoot's spoken voice.
- The 10 most recent decided cases may be stored on the device. Cases that trigger the grown-up safety handoff are not saved in Case Files.
- RevenueCat processes limited device and purchase information to operate subscriptions.

2. Information handled by the App

A. Spoken arguments and speech transcripts

With microphone and speech-recognition permission, the App temporarily accesses microphone audio while a child presents an argument. The App does not intentionally save the audio recording.

The App asks Apple's Speech framework to perform recognition on the device when that capability is available. If it is not available, Apple may process audio using its speech-recognition service. Apple's handling of that information is governed by Apple's applicable privacy terms.

The resulting transcript may contain whatever a child chooses to say. Although the App uses animal characters instead of real names, a child could still speak a name or other personal or sensitive information. Parents should tell children not to share full names, addresses, school names, contact information, passwords, medical details, or other information that is not needed to resolve the disagreement.

B. AI judgment and spoken rulings

To provide a ruling, the App sends the following to OpenAI:

- the two argument transcripts;
- the selected animal characters;
- the selected court balance and parenting-style setting;

- instructions needed to produce a structured, age-appropriate ruling; and
- a random installation identifier used for abuse and safety monitoring. This identifier is not an advertising identifier and is not based on a name, account, or Apple device identifier.

OpenAI returns a ruling, explanation, and next steps. To create Judge Hoot's neural voice, the App may send the ruling text to OpenAI's text-to-speech service and receive generated audio. If that request fails, the App uses an Apple system voice instead.

We configure judgment requests not to create stored application history (`store: false`). OpenAI states that API data is not used to train its models by default. Unless our OpenAI project has been approved and configured for Zero Data Retention, OpenAI may retain customer content in abuse-monitoring logs for up to 30 days. We will update this Policy if the production retention configuration changes.

C. Case Files and app preferences stored on the device

For a decided case, the App may store the following locally on the device:

- the date;
- each animal character;
- both transcripts;
- the selected court mode;
- the ruling, reason, and next steps; and
- which side, if any, the ruling favored.

The App keeps no more than the 10 most recent decided cases. A grown-up can delete all Case Files from Court Settings. Removing the App also removes its locally stored data, subject to the device's backup and restore behavior. Cases that trigger the grown-up safety handoff are not added to Case Files.

The App also stores preferences such as animal choices, parenting style, speech speed, onboarding status, the number of completed free cases, and the random installation safety identifier using on-device app storage.

D. Purchases and subscriptions

Purchases are processed by Apple. We do not receive a full payment-card number.

We use RevenueCat to determine subscription status and unlock unlimited cases. RevenueCat may receive an anonymous App User ID, Apple receipt and transaction information, product and entitlement information, device type, operating system, locale or currency information, IP address, and timestamps such as the last time the App contacted the service. We use this information only to provide purchase functionality, restore purchases, prevent fraud, provide customer support, and understand subscription performance.

We do not configure RevenueCat with a child's name, email address, advertising identifier, or custom account identifier. RevenueCat does not receive the children's arguments, transcripts, Case Files, or AI rulings from us.

E. Support communications

If a parent contacts us for support, we receive the information the parent chooses to provide, such as an email address, message, and troubleshooting details. Please do not send children's argument transcripts or other sensitive information in a support request.

3. Why we use information

We use information only as reasonably necessary to:

- turn spoken arguments into text;
- generate and speak a ruling;

- provide the grown-up safety handoff;
- save and display recent Case Files on the device;
- remember settings and free-case usage;
- operate, verify, and restore subscriptions;
- maintain security and prevent misuse; and
- respond to parent or guardian support requests.

Where applicable law requires consent, we rely on the consent of the parent or legal guardian. In other circumstances, processing may be necessary to provide the service requested or to comply with law.

4. Children's privacy and parental consent

Kid Court is directed to families with children. We design the App to minimize children's data: there are no accounts, typed names, advertising, social features, public profiles, or third-party behavioral analytics.

Before enabling cloud AI features for a child under 13 in the United States, or under the applicable age of digital consent elsewhere, a parent or guardian must review this Policy and provide any consent required by law. Where the law requires a separate verifiable-parental-consent process, the child must not use cloud AI features until that process has been completed. A parental gate used to protect settings or purchases is not, by itself, verifiable parental consent.

A parent or guardian may refuse or withdraw consent, disable microphone or speech-recognition access in iOS Settings, delete local Case Files in Court Settings, or contact us to ask about or request deletion of information handled by us or our processors. Withdrawal may prevent the core case feature from working.

If we learn that information from a child was handled in a way that required parental consent and valid consent was not obtained, we will take reasonable steps to delete it.

5. When information is shared

We share information only with service providers needed to operate the App:

- **Apple:** app distribution, permissions, speech recognition when on-device recognition is unavailable, in-app purchases, and system services;
- **OpenAI:** AI ruling generation and optional text-to-speech, as described above; and
- **RevenueCat:** subscription validation and management, as described above.

We require service providers to protect information consistently with this Policy and applicable law. Their own services are also governed by their terms and privacy notices.

We may also disclose information if reasonably necessary to comply with law, protect the safety or rights of a child or another person, investigate misuse, or complete a merger, acquisition, financing, or sale of assets subject to appropriate protections. We do not sell or rent personal information.

6. Retention and deletion

- **Microphone audio:** temporarily processed for speech recognition and not intentionally stored by the App. Apple controls any server-side processing and retention by its speech service.
- **Local Case Files:** limited to the latest 10 decided cases and retained until replaced, deleted in Court Settings, or removed with the App, subject to device backups.
- **Safety-handoff cases:** not stored in local Case Files. Text that reaches OpenAI is subject to the OpenAI retention described in Section 2(B).
- **OpenAI data:** subject to the production retention configuration described in Section 2(B).

- **Purchase records:** retained by Apple and RevenueCat for as long as needed to provide and restore purchases, prevent fraud, meet accounting or legal obligations, and resolve disputes.
- **Support messages:** retained only as long as reasonably needed to respond, maintain records, and meet legal obligations.

To request deletion of information held by us or our service providers, a parent or guardian may contact **charles@productsnotpowerpoints.com**. We may need limited information to locate an anonymous purchase record. Some records may be retained where required by law or needed to establish, exercise, or defend legal claims.

7. Choices and rights

Depending on location, a parent or guardian may have rights to request access to, correction of, deletion of, restriction of, or a copy of personal information, or to object to or withdraw consent for certain processing. A parent may also review or delete the child's locally stored Case Files directly in the App.

Requests may be sent to **charles@productsnotpowerpoints.com**. We may take reasonable steps to verify that the requester is the child's parent or legal guardian. A person in the EEA or UK may also complain to their local data-protection authority. A person elsewhere may have the right to contact the relevant privacy regulator.

The App does not use personal information for cross-context behavioral advertising and does not sell or share personal information for targeted advertising.

8. Security and international processing

We use reasonable technical and organizational safeguards designed to protect information. No method of transmission or storage is completely secure, so we cannot guarantee absolute security.

Apple, OpenAI, and RevenueCat may process information in countries other than the user's country. Where required, we and our processors use lawful safeguards for international transfers.

9. Changes to this Policy

We may update this Policy as the App, our service providers, or legal requirements change. We will change the "Last updated" date and provide additional notice when required. If a change materially affects how children's personal information is collected, used, or disclosed, we will obtain new parental consent where required.

10. Contact us

Questions, privacy requests, and parental inquiries may be sent to:
